

Recirculating Chiller F-105

The efficient way of cooling

Cost-effective Recirculating Chiller with 500 W cooling capacity, particularly suitable for Rotavapor® R-100 systems. Efficient distillation due to full integration of the refrigerator in the evaporation system.

Efficient

Easy to use the universal cooling unit

Ecological

Saves water, reduces emissions and conserves energy

Interactive

Well integrated into the BUCHI evaporation system

F-105: Your most important benefits

Efficient

- Efficient distillation due to complete integration into the evaporation system Rotavapor® R-100
- Shuts off automatically between distillations, hence unnecessary downtime is eliminated

Ecological

- Sustainable operation due to no water consumption
- Conserves energy by switching into standby-mode if not in use
- Reduces solvent emissions of the distillation

Interactive

- Process optimization due to interaction with the entire Rotavapor®-system
- Optimized handling by centralized process control
- Perfectly compatible with a variety of BUCHI products

Complete your portfolio
